Individual self-assessment | **10%**

Individual engagement in classes | **40%**

Quality of group feedback | **10%**

Group work: design and presentation of a game | **40%**

SUMMER COURSE 1

Sustainability Gamified

January 11 to 16, 2027

APPROACH TO TEACHING & LEARNING

For the field of Sustainable Development, games are very effective for the learning process, as they can, in simple language, present complex concepts, promote tangible experience, generate reflection, and potentially induce changes in individual and collective motivations, values, and behaviors.

Thus, we will work through games on various sustainability themes and their relation to the current context, such as gender and inequalities, climate change, conservation, consumption, and more.

We aim to build a critical and reflective perspective that enables each participant to connect sustainability issues to various areas of Administration.

Activities will include lectures, group discussions, group dynamics, individual reflective activities, and prototyping exercises. We will also have a few field trips.

SUMMER COURSE 2

Sustainability Expedition: Tapajós

SCHEDULE

January 18 - 22

TAPAJÓS RIVER BASIN in Amazon region Brazil

Academic

- Transcript from FGV EAESP;
- 4-credit course;
- 60 hours of class, field trips and more.

Cultural engagement

SUMMER COURSE 2

Sustainability Expedition: Tapajós

January 18 - 22

TAPAJÓS RIVER BASIN in Amazon region Brazil

REGIONAL BOATS

Most of our trip will take place in a local boat:

- The boat contains all the security structure needed (safe vests, radio, support boat, and experienced crew).
- There are two bathrooms (men and women) on the boat.
- Participants sleep in **hammocks**.
- All the food is prepared and served on board (participants' food restrictions and allergies are asked previously); non-alcoholic beverage is included in the tuition fee.
- Shower and toilet water come from the own river; there is no heating system in the boat, but due to local weather (approximately 30°C/86°F) this is not needed.

SUMMER COURSE 2

Sustainability Expedition: Tapajós

January 18 to 22, 2027

APPROACH TO TEACHING & LEARNING

This expedition is a learning experience where students can directly interact with part of the Amazon territory and its local actors.

The discipline objectives are:

- Presenting and making tangible, through experiential, collective and theoretical learning, questions that permeate the concepts of sustainable development and leadership for sustainability.
- Promoting field research and reflection on development models present in the territory visited from the contact and relationship with different realities and social actors (companies, local communities, NGOs, etc.).
- Developing critical thinking that integrates perspectives on the environment, society, economy, politics, ethics and human values to decision making and leadership abilities.
